

# COPE PERFORMANCE BULK™

## Treated Bulk Salt

### Applications

Used in the same manner as halite rock salt to treat roadways and parking lots.

Additive enhances the performance of the rock salt to increase the speed and effectiveness, as well as penetration.

Reduces leaching during application and aids in the reduction of clumping.

**Just like our Cope Performance Blend™, Cope Performance Bulk™ is a proprietary ice melt blend added to halite rock salt and formulated for the Mid-Atlantic Region.**

Add Cope Performance Bulk to your salt de-icing program to enhance its effectiveness and make your efforts more efficient. The treated bulk salt reduces bounce off hard surfaces, draws moisture to jump-start melt, and works at lower temperatures than rock salt alone.

Cope Performance Bulk is effective to +5° F.
